Contents

Preface iii

I Introduction and Motivation 1

1 Introduction 3

1.1 A Simple 2-period-lived Example 4

1.2 Equilibrium Solution 5

1.3 Perfect Foresight versus Uncertainty 6

1.4 Outline 7

II Simple OG Model with Exogenous Labor Supply 9

2 3-period-lived Agents with Exogenous Labor Supply 11

2.1 Households 12

2.2 Firms 17

2.3 Market clearing 18

2.4 Equilibrium 18

2.5 Solution method: time path iteration (TPI) 21

2.6 Calibration 24

2.7 Exercises 24

3 *S*-period-lived Agent Problem with Exogenous labor Supply 27

3.1 Households 27

3.2 Firms . . . 32
3.3 Market clearing . . . 33
3.4 Equilibrium . . . 33
3.5 Solution method: time path iteration (TPI) . . . 36
3.6 Calibration . . . 38
3.7 Exercises . . . 38

III Endogenous Labor and Heterogeneous Ability 43

4 *S*-period-lived Agents with Endogenous Labor 45
4.1 Disutility of labor . . . 45
4.2 Households . . . 50
4.3 Firms . . . 51
4.4 Market Clearing . . . 52
4.5 Equilibrium . . . 52
4.6 Solution Method . . . 55
4.7 Calibration . . . 65
4.8 Exercises . . . 68

5 *S*-period-lived Agents with Endogenous Labor and Dynamic Firms 73
5.1 Households . . . 73
5.2 Firms . . . 75
5.3 Market Clearing . . . 81
5.4 Equilibrium . . . 81
5.5 Solution Method . . . 83
5.6 Calibration . . . 92
5.7 Exercises . . . 96

6 *S*-period Lives, Endogenous Labor, and Heterogeneous Abilities 101
6.1 Heterogeneous lifetime ability paths . . . 101
6.2 Households . . . 103

6.3 Firms . . . 105
6.4 Market clearing . . . 106
6.5 Equilibrium . . . 106
6.6 Solution Method . . . 109
6.7 Calibration . . . 119
6.8 Exercises . . . 119

7 Simple Stochastic Ability **123**
7.1 Households . . . 123
7.2 Firms . . . 127
7.3 Market clearing . . . 128
7.4 Equilibrium . . . 129
7.5 Solution Method . . . 130
7.6 Exercises . . . 137

IV Population Dynamics, Productivity Growth, and Stationarization **139**

8 *S*-period-lived Agent Problem with Exogenous Labor Supply, Demographic Dynamics, and Productivity Growth **141**
8.1 Population Dynamics . . . 142
8.2 Households . . . 143
8.3 Firms . . . 146
8.4 Market clearing . . . 146
8.5 Equilibrium . . . 148
8.6 Solution method: time path iteration (TPI) . . . 154
8.7 Calibration . . . 158
8.8 Exercises . . . 169

V Bequests **175**

9 *S*-period Lives, Exogenous Labor, Intended Bequests **177**

9.1 Bequest Data . . . 177
9.2 Households . . . 179
9.3 Firms . . . 183
9.4 Market clearing . . . 184
9.5 Equilibrium . . . 184
9.6 Solution method: time path iteration (TPI) . . . 187
9.7 Calibration . . . 190
9.8 Exercises . . . 190

10 *S*-period Lives, Exogenous Labor, Bequests with Population Dynamics **195**

11 Bequests with Population Dynamics, Endogenous Labor, and Heterogeneous Abilities **197**

VI Household taxes and government budget constraint **199**

12 Household taxes **201**

12.1 Incorporating Tax Functions into DGE Model . . . 201
12.2 Households . . . 221
12.3 Firms . . . 224
12.4 Government balanced budget . . . 224
12.5 Market Clearing . . . 225
12.6 Equilibrium . . . 225
12.7 Solution Method . . . 228
12.8 Calibration . . . 234
12.9 Exercises . . . 234

13 Unbalanced government budget constraint **235**

13.1 Households . . . 235

13.2 Firms . . . 237
13.3 Government . . . 238
13.4 Market Clearing . . . 240
13.5 Equilibrium . . . 240
13.6 Solution Method . . . 244
13.7 Calibration . . . 254
13.8 Exercises . . . 256

14 Modeling Social Security and pension systems **259**

VII Multiple industries, multiple goods **261**

15 Two Industries, Two Goods, Three-period-lived agents **263**
15.1 Households . . . 263
15.2 Firms . . . 269
15.3 Market clearing . . . 271
15.4 Equilibrium . . . 273
15.5 Solution method . . . 274
15.6 Calibration . . . 278
15.7 Exercises . . . 278

16 Multiple Static Industries **279**
16.1 Household Industry-specific Consumption . . . 279
16.2 Household Composite Consumption . . . 281
16.3 Industries and Firms . . . 283
16.4 Market Clearing . . . 284
16.5 Equilibrium . . . 285
16.6 Solution Method . . . 287
16.7 Calibration . . . 291
16.8 Exercises . . . 291

17 Multiple Static Industries, Endogenous Labor **293**

17.1 Household Industry-specific Consumption 293

17.2 Household Composite Consumption and Labor 295

17.3 Industries and Firms 298

17.4 Market Clearing 300

17.5 Equilibrium 301

17.6 Solution Method 303

17.7 Calibration 311

17.8 Exercises 311

18 Multiple industries, Multiple Goods, and *S*-period-lived individuals **313**

18.1 Households 313

18.2 Firms 318

18.3 Market clearing 319

18.4 Equilibrium 321

19 Multiple dynamic industries, Multiple Goods, and *S*-period-lived individuals **323**

VIII International markets **325**

20 Small Open Economy OG Model **327**

20.1 Households 327

20.2 Firms 328

20.3 Market Clearing 329

20.4 Equilibrium 329

20.5 Solution Method 332

20.6 Calibration 337

20.7 Exercises 340

21 Multi-country (Large Open Economy) OG Model **343**

21.1 Households . . . 344

21.2 Firms . . . 349

21.3 Market Clearing . . . 355

21.4 Equilibrium . . . 357

21.5 Solution Method . . . 358

21.6 Calibration . . . 360

21.7 Exercises . . . 361

IX Aggregate Shocks, Asset Pricing, and Adaptive Expectations **363**

22 Aggregate Shocks and Business Cycles **365**

22.1 Two-period model . . . 365

22.2 Three-period model . . . 365

23 Asset Pricing **373**

24 Adaptive Expectations **375**

X Monetary Policy **377**

25 Monetary Policy **379**

XI Calibration **381**

26 Labor supply distribution **383**

27 Wealth distribution **385**

Appendices **389**

A Derivations **389**

A.1 Properties of the CES Production Function 389

B Endogenous Grid Method **391**

B.1 Final two periods of life solutions: ages *S* and *S-1* 391

C Using Python **395**

C.1 Installing Python 395

C.2 Learning Python 396

C.3 Principles of Writing Good Code 397

C.4 Running Python 398

C.5 Debugging 400

C.6 Python cheat sheet 400

C.7 Optimization: Root Finders and Minimizers 400

D Using `Git` and GitHub.com **403**

D.1 Why Not Use Dropbox or Google Docs? 404

D.2 Installing `Git` and Settings 406

D.3 `Git` and GitHub Structure, Workflow 406

D.4 `Git` Cheat Sheet Commands 415

D.5 Using GitHub for Collaborative Issue Tracking 416

E Calibration **419**

E.1 Initial period labor supply Euler equations 419

E.2 Alternative Explanation/Derivation 422

F Tax Data with Tax-Calculator **427**

F.1 TaxBrain Web Application 427

F.2 Command Line Interface (CLI) 427

F.3 Python Application Program Interface (API) 427

F.4 Exercises 428
